Figure 1-1. 313V-2 Radio Set Control

---

**general description****1.1 Purpose of Unit.**

The 313V-2 Radio Set performs all control functions of the 618T-( ) Transportable HF Communication System. The 313V-2 provides remote control operation, and may be located up to 350 feet from the 618T-( ) Receiver-Transmitter.

**1.2 Description of Unit.**

The 313V-2 case is equipped with cam action spring fasteners for quick and easy mounting. Knobs for rf sensitivity, volume control, frequency and mode selection provide complete control of the 618T-( ). A receiver alarm light and alarm reset button give indication and control of the operation of the receiver overload protector. The wattmeter on the front panel is equipped with a polarity switch for measuring forward and reflected rf power output. A light switch is included to control panel lights for night operation. Jacks are provided on the front panel for plugging in microphone, key and headset. Connectors on the bottom of the 313V-2 are for cables to the 76F-1 Speaker/Amplifier and the distribution box of the 790U-1 Speaker-Control Mounting.

**1.3 Lamp Complement.**

Table 1-1 lists the lamp complement of the 313V-2.

TABLE 1-1. LAMP COMPLEMENT

| LAMP                    | COLOR | COLLINS PART NO. | GE CATALOG NO. |
|-------------------------|-------|------------------|----------------|
| Panel (1)               | Red   | 262-0176-00      | 327            |
| Frequency indicator (2) | Red   | 262-0465-00      | 327            |
| Receiver alarm (1)      | Red   | 262-0176-00      | 327            |

**1.4 Equipment Specifications.****1.4.1 PHYSICAL.**

Size . . . . . 3-5/8 inches wide, 4-1/2 inches deep,  
11-1/2 inches high including connectors.

Knob projection . . . . . 1-1/8 inches maximum above front panel.

|                                     |  |
|-------------------------------------|--|
| Weight . . . . .                    | 7 pounds.  |
| Construction . . . . .              | 1/16-inch aluminum box, 3/16-inch aluminum cover. Gaskets and O-rings provide waterproofing. |
| Mounting . . . . .                  | Three quick release fasteners.   |
| Ambient temperature range . . . . . | -40° C to +50° C.  |
| Altitude . . . . .                  | To 15,000 feet.  |
| Vibration . . . . .                 | Requirements of MIL-STD-167 (Ships) Type 1.  |

#### 1.4.2 ELECTRICAL.

|                        |   |
|------------------------|---|
| Power input . . . . .  | 28 volts dc at 300 milliamperes nominal current (when 76F-1 Speaker/Amplifier is connected and operating).  |
| Lighting . . . . .     | Two red lights behind panel illuminate the frequency indicator dials. A red light above wattmeter illuminates the meter and dials. A red light is used as a receiver alarm indicator. |
| Audio output . . . . . | 300 ohms, 20 dbm maximum.   |
| Audio input . . . . .  | 100 ohms, carbon microphone.  |

# section 2

## operation

### 2.1 General.

The 313V-2 Radio Set Control contains switches which control the operation of the radio set. The 313V-2 operates the 618T-( ), turns on the equipment in the power unit, and supplies band information to the 490B-1 Antenna Coupler.

The desired control function is activated by grounding the proper terminal through a switch. Refer to figure 2-1.

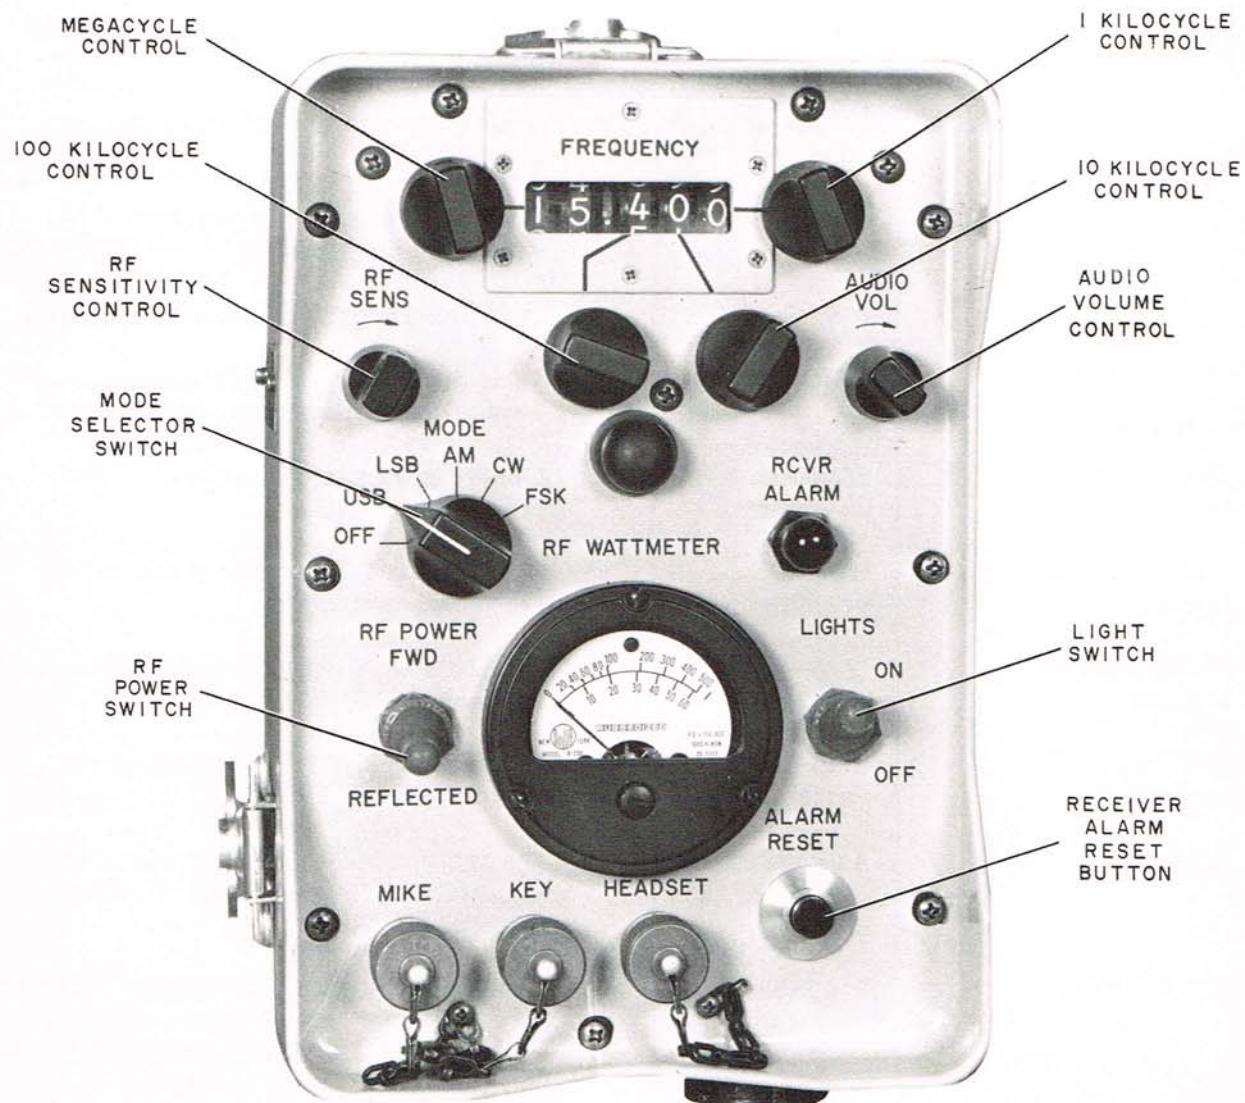

Figure 2-1. Control Switches

Also contained in the 313V-2 are the audio and rf gain controls operated by the AUDIO VOL and RF SENS knobs on the control panel.

## 2.2 Switch Functions.

See figure 2-1 for switch location and table 2-1 for switch functions.

TABLE 2-1. OPERATING CONTROLS

| SWITCH                | POSITION      | FUNCTION   |
|-----------------------|---------------|--|
| MODE                  | OFF           | Turns off power to the radio set.  |
|                       | USB           | Puts the radio set in upper sideband operation.  |
|                       | LSB           | Puts the radio set in lower sideband operation   |
|                       | AM            | Puts the radio set in amplitude - modulation operation.  |
|                       | CW            | Puts the radio set in CW operation.  |
|                       | FSK           | Puts the radio set in frequency shift keying (teletypewriter) operation.   |
| Megacycle control     | Step-variable | Controls megacycle indicator on frequency selector.  |
| 100-kilocycle control | Step-variable | Controls 100-kilocycle indicator on frequency selector.  |
| 10-kilocycle control  | Step-variable | Controls 10-kilocycle indicator on frequency selector.   |
| 1-kilocycle control   | Step-variable | Controls 1-kilocycle indicator on frequency selector.  |
| RF SENS               | Variable      | Controls a 5000-ohm, 10-log taper potentiometer to provide rf sensitivity control for the 618T-( ).  |
| AUDIO VOL             | Variable      | Controls 300-ohm, bridged-T attenuator to vary audio output from 618T-( ) to headset. The audio signal to 76F-1 is not affected by this control. |

TABLE 2-1. OPERATING CONTROLS (Cont)

| SWITCH                | POSITION  | FUNCTION   |
|-----------------------|-----------|--|
| RF POWER              | FWD       | Used to read forward power output (upper scale of RF WATTMETER).   |
|                       | REFLECTED | Used to read reflected power output (lower scale of RF WATTMETER).   |
| LIGHTS                | ON        | Turns on panel and frequency dial lamps.   |
|                       | OFF       | Turns off panel and frequency dial lamps.  |
| ALARM RESET<br>button |           | When RCVR ALARM light indicates that receiver antenna circuit has been interrupted, resets alarm and establishes continuity in the receiver antenna circuit. |

# section **3**

## **maintenance**

### **3.1 Maintenance Tests.**

#### **3.1.1 TEST EQUIPMENT REQUIRED.**

The equipment required is listed in table 3-1.

TABLE 3-1. TEST EQUIPMENT REQUIRED

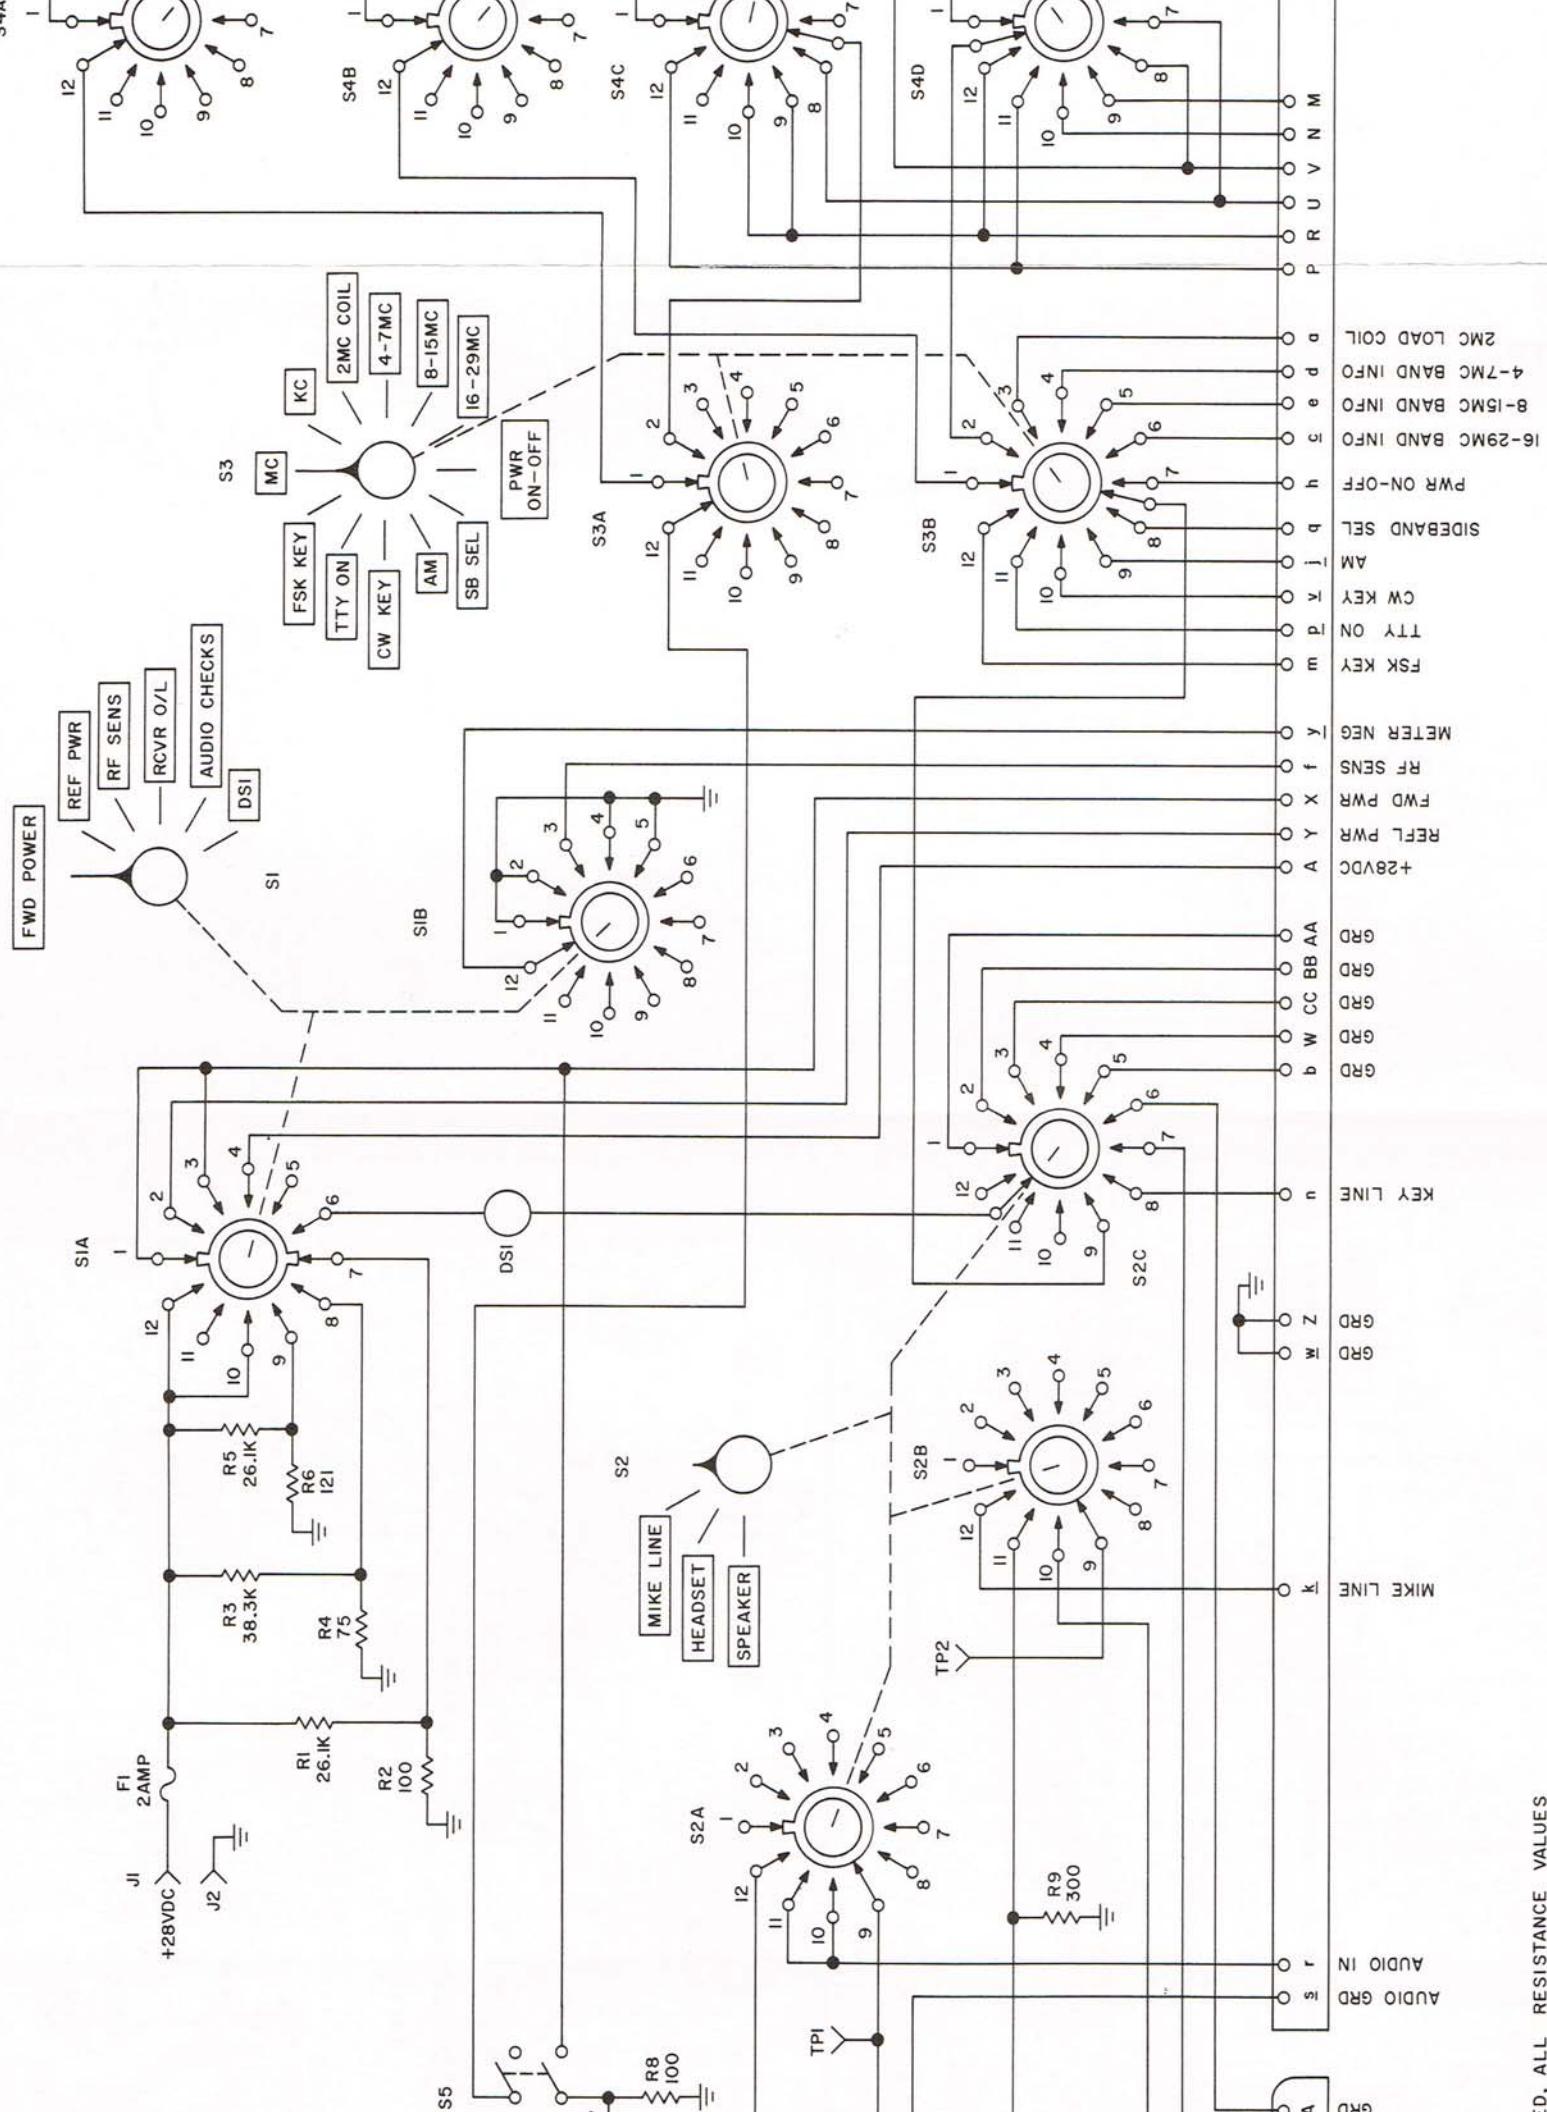

| EQUIPMENT                               | MANUFACTURER/MODEL   |
|---|--|
| Power supply, 28 volts dc,<br>3 amperes |  |
| Audio signal generator                  | Hewlett-Packard 200CD  |
| Vtvm                                    | Hewlett-Packard 400D   |
| Test Set                                | (See figures 3-1 and 3-2 for suggested<br>test set schematic and front panel layout) |
| Shorting plug                           | PJ-055B (CPN 361 0018 00) Sleeve<br>shorted to tip                                   |

#### **3.1.2 INITIAL ADJUSTMENTS.**

- a. Set all 313V-2 controls to the extreme counterclockwise position or to zero as applicable.
- b. Set the test set switches as follows:

|    |            |
|----|------------|
| S1 | DS1        |
| S2 | 9          |
| S3 | PWR ON/OFF |
| S4 | 1          |
| S5 | OPEN       |

- c. Connect all cables from the test set to the 313V-2.
- d. Apply 28 volts dc to J1 of the test set and ground J2.

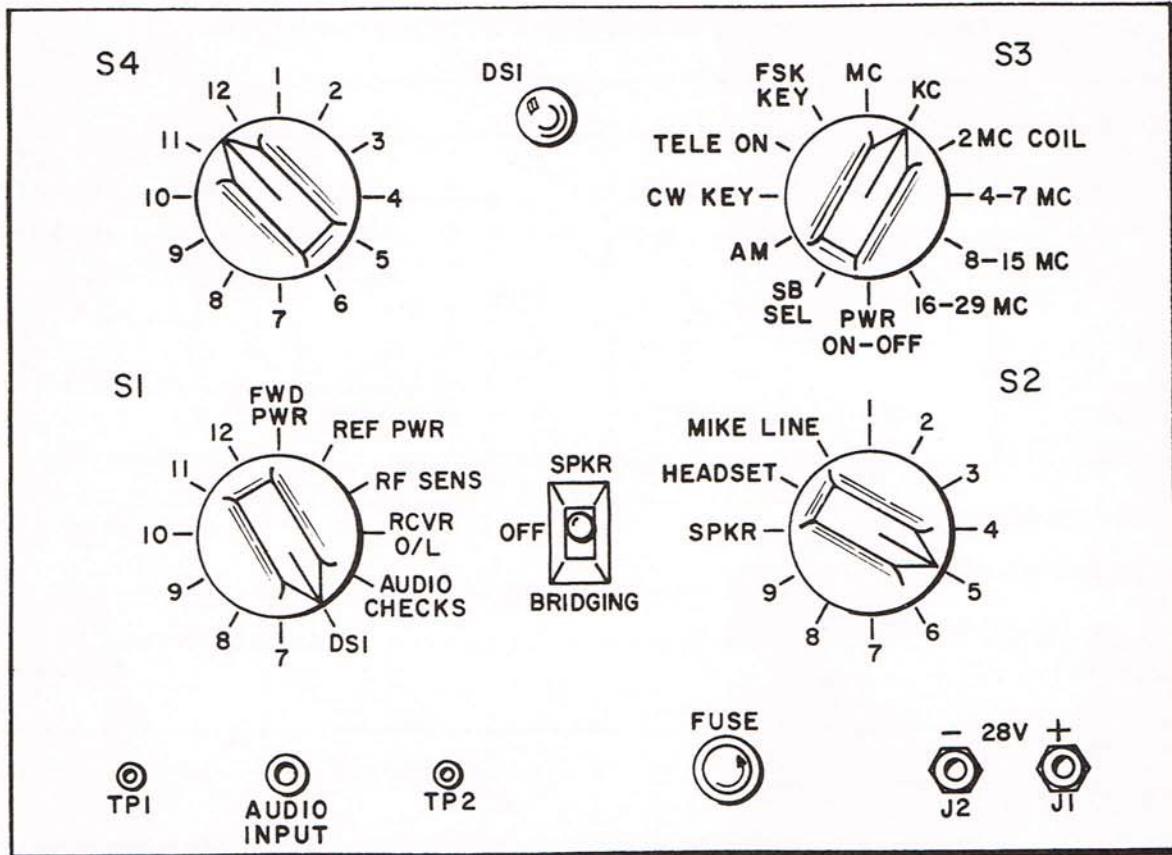

Figure 3-2. 313V-2 Test Set, Front Panel

## 3.1.3 MODE SELECTOR SWITCH TEST.

Position MODE switch on the 313V-2 and S3 on the test set as shown in table 3-2. Determine proper operation by noting the condition of the test set lamp for all switch positions shown.

TABLE 3-2. MODE SELECTOR SWITCH TEST

| MODE<br>SELECTOR<br>SWITCH | S3            |           |    |    |            |            |
|----------------------------|---------------|-----------|----|----|------------|------------|
|                            | PWR<br>ON/OFF | SB<br>SEL | AM | CW | TELE<br>ON | FSK<br>KEY |
| OFF                        | O             | O         | O  | O  | O          | O          |
| USB                        | X             | X         | O  | O  | O          | O          |
| LSB                        | X             | O         | O  | O  | O          | O          |

TABLE 3-2. MODE SELECTOR SWITCH TEST (Cont)

| MODE<br>SELECTOR<br>SWITCH | S3            |           |    |    |            |            |
|----------------------------|---------------|-----------|----|----|------------|------------|
|                            | PWR<br>ON/OFF | SB<br>SEL | AM | CW | TELE<br>ON | FSK<br>KEY |
| AM                         | X             | X         | X  | O  | O          | O          |
| CW                         | X             | X         | O  | X  | O          | O          |
| FSK                        | X             | X         | O  | O  | X          | X          |

X indicates test set lamp on.

O indicates test set lamp off.

NOTE: When S3 is in CW position a shorted plug must be inserted in the KEY jack in the 313V-2.

### 3.1.4 FREQUENCY SELECTOR TESTS.

3.1.4.1 MEGACYCLE SELECTOR TEST. Rotate S3 on test set to the MC position. Use table 3-3 to determine proper grounding of the control wires. Use table 3-4 to position megacycle selector on the 313V-2 and S4 on the test set for bridging tests.

TABLE 3-3. MEGACYCLE SELECTOR TEST

| MEGACYCLE<br>SELECTOR | S4 |   |   |   |   |
|-----------------------|----|---|---|---|---|
|                       | 1  | 2 | 3 | 4 | 5 |
| 2                     | X  | O | O | O | O |
| 3                     | X  | X | O | O | O |

| 29                 | O                 | O      | O       | X        |

X indicates test set lamp is on.  
O indicates test set lamp is off.

## 3.1.6 AUDIO TEST.

Rotate S1 on the test set to AUDIO CHECKS position. Connect the output of the HP-200CD to the AUDIO INPUT jack of the test set. Rotate S2 to HEADSET position. Using the HP-400D VTVM, adjust the output of the 200CD to 5.0 volts rms, 1000 cps and apply to the AUDIO INPUT jack of the test set. The voltage measured at TP1 should be 5 volts rms. Measure the voltage at both the extreme clockwise and extreme counterclockwise positions of the AUDIO VOL control of the 313V-2. The clockwise measurement should be not less than 4.9 volts rms and the counterclockwise measurement should not exceed 50 mv.

Adjust the AUDIO VOL control to obtain minimum output at TP2. Rotate S2 to the SPEAKER position, and check TP1 for 5 volts rms. The voltage at TP2 should be between 0.70 and 0.85 volt rms.

Rotate S2 to the MIKE LINE position. Check TP1 for 5 volts rms. The voltage measured at TP2 should be not less than 4.9 volts rms.

### 3.1.7 RF WATTMETER TEST.

Place S1 of the test set in FWD PWR position and the RF POWER switch of the 313V-2 in the FWD position. The indicated power on the upper scale of the RF WATTMETER should read between 270 and 310 watts. Rotate S1 to the REF POWER position and the RF POWER switch to REFLECTED. Again on the upper scale of the RF WATTMETER there should be an indication between 90 and 110 watts.

### 3.1.8 RF SENSITIVITY CONTROL TEST.

Rotate S1 of the test set to RF SENS position and set the RF POWER switch of the 313V-2 to FWD position. Rotate the RF SENS control on the 313V-2 throughout its range. The high reading on the upper scale of the RF WATTMETER should be between 350 and 460 watts. The low reading should be between 20 and 60 watts.

### 3.1.9 RECEIVER OVERLOAD PROTECTION TEST.

Rotate S1 on the test set to RCVR OVLD position. The RCVR ALARM light should go on. Press the ALARM RESET button and the RCVR ALARM light should go out and stay out as long as the button is down.

### 3.1.10 SPEAKER 28-VOLT DC TEST.

Rotate S1 on the test set to RCVR OVLD position. Push S5 on the test set to SPEAKER 28 VDC position. The upper scale of the RF WATTMETER should read between 270 and 310 watts.

## 3.2 Preventive Maintenance.

### 3.2.1 LUBRICATING PROCEDURES.

- a. Oil all bearing surfaces with Univis P-38 (MIL-I-6085) oil, applying sparingly with fingers. Wipe off excess and do not allow any oil to drip onto associated equipment.
- b. Grease the teeth of all gears, applying with a toothpick or small screwdriver. Take care to work the grease in well. Remove all excess grease.

## 3.3 Frequency Indicator Disassembly.

- a. Remove the front panel of the 313V-2 by removing the nine screws holding it to the cover.
- b. The megacycle wafer switch may be removed by unscrewing the three screws on the aluminum mounting plate beneath the switch. Set the frequency to 2.000 mc before removing the switch.

- c. Remove the knob and the nut from the shaft of the AUDIO VOL control, and slide it back through the panel.
- d. Remove the three screws on the front panel, and loosen the set screws on the frequency selection knobs with an Allen wrench to remove them.
- e. It is not necessary to remove the FREQUENCY plate from the front panel.
- f. The indicator unit should slip out easily to the rear.
- g. The gears may be removed by loosening their set screws and punching out their taps. New gears must be drilled to accommodate a tap before installation.
- h. Make sure the megacycle switch wafer assembly shaft is turned to the clockwise stop when meshing the gears in reassembly.

#### **3.4 Replacement of Lamps.**

- a. The front panel lamp may be removed by unscrewing the lamp holder on the front panel of the unit.
- b. To replace the frequency dial lamps it is necessary to first remove the front panel by unscrewing the nine Phillips screws on the panel.
- c. On the back of the front panel, unscrew the Phillips screw holding the copper strip to the lamp bases. Remove the screw, strip, and terminal lugs. The lamps may now be easily removed.
- d. In replacing the frequency dial lamps, be sure to slip them through the white terminal lugs before inserting them into the white lamp housing. Slip the Phillips screw through the red terminal lug and secure the copper strip to the lamp housing.

# section 4

## parts list

| ITEM | DESCRIPTION  | COLLINS PART NUMBER |
|------|--|---------------------|
|      | CONTROL, RADIO SET-313V-2  | 522-3356-00         |
